Consolidators have historically had to deal with sheets and sheets of paper detailing their negotiated fares with each airline. Each reservation clerk would have their folder or folders of hundreds of sheets showing the fares in their raw form. Now using Faresbureau each reservation clerk can instantly look up the fares for a routing as required by the customer. The system shows all airlines on one screen and details all rules etc.

Faresbureau is made up of modules. The first is the maintenance module which is used for the entry of the contracts and the general setup of the system. Another is the query module which is used by reservation staff to search for fares upon receiving requests from customers.

We have now "web enabled" this system. All external travel agency customers can now find the consolidated fares instantly without the need to make expensive telephone calls. When you purchase a licence we provide you with a system to display your fares to any agency you wish.

Fig 1. The main menu for the maintenance module

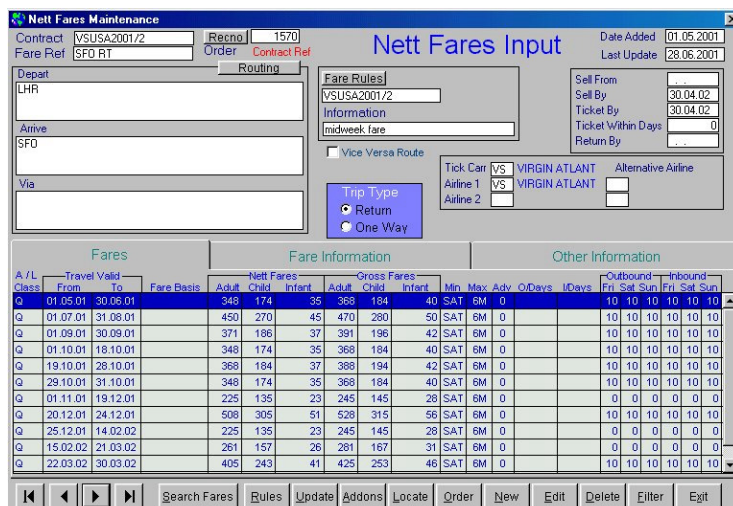

Fig 2. The nett fare input screen

The fare search system has an expert mode. The entry has been designed along the lines of GDS commands i.e. LONSYD25FEB would represent any London Airport to Sydney, Australia departing on the 25th February. No return date was offered and so the system would return all fares that have a season which meets the departure date. There are many variables that can be entered to narrow down the search criteria.

The next screen shows the result of the search
